ML Homework4

TAs' email address: jhhlab.tw@gmail.com

Description:

1. Logistic regression

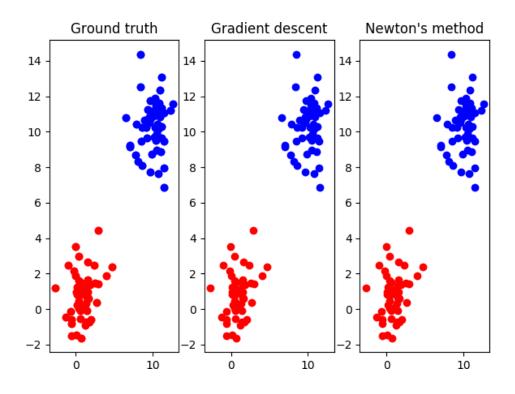

- Input:
 - 1. N (number of data points)
 - 2. $mx_1, vx_1, my_1, vy_1, mx_2, vx_2, my_2, vy_2$ (m: mean, v variance)
- Function:
 - 1. Generate n data point: $D1 = (x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$, where x and y are independently sampled from $N(mx_1, vx_1)$ and $N(my_1, vy_1)$ respectively.
 - 2. Generate n data point: $D2 = (x_1, y_1), (x_2, y_2), \dots, (x_n, y_n)$, where x and y are independently sampled from $N(mx_2, vx_2)$ and $N(my_2, vy_2)$ respectively.
 - 3. Use Logistic regression to separate D1 and D2. You should implement both Newton's and steepest gradient descent method during optimization.
 - In other words, when the Hessian is singular, use steepest descent for instead. You should come up with a reasonable rule to determine convergence.(a simple run out of the loop should be used as the ultimatum)
- Output:
 - 1. The confusion matrix and the **sensitivity** and **specificity** of the logistic regression applied to the training data *D*.
 - 2. Visualization
 - Plot the ground truth
 - Plot the predict result
 - Gradient descent
 - Newton's method

Use the Gaussian random number generator in homework 3.

- Sample input & output (for reference only)
 - Case 1: $N = 50, mx_1 = my_1 = 1, mx_2 = my_2 = 10, vx_1 = vy_1 = vx_2 = vy_2 = 2$

2. EM algorithm

- Input: MNIST training data and label sets. (Same as HW02)
- Function:
 - Binning the gray level value into two bins. Treating all pixels as random variables following Bernoulli distributions. Note that each pixel follows a different Binomial distribution independent to others.
 - 2. Use EM algorithm to cluster each image into ten groups. You should come up with a reasonable rule to determine convergence. (a simple run out of the loop should be used as the ultimatum)
- Output:
 - 1. For each digit, output a confusion matrix and the **sensitivity** and **specificity** of the clustering applied to the training data.
 - 2. Print out the imagination of numbers in your classifier
 - Just like before, about the details please refer to HW02
- Hint: The algorithm is a kind of unsupervised learning, so the labels are not used during training. But you can use these labels to help you to figure out which class belongs to which number.

In other words, you should find a way to assign label to each class which you classified before you compute the confusion matrix

Sample input & output (for reference only)
